“Unable to open Project..”	5

PlanRoom

Plan Category color

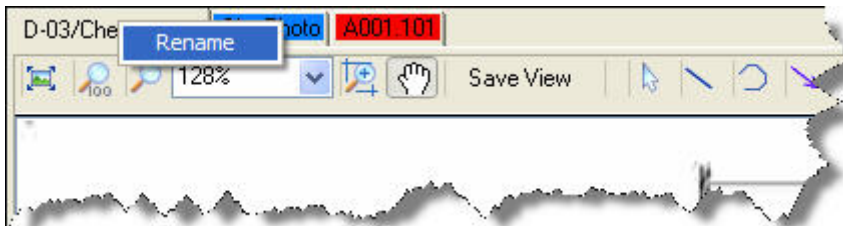

Color code specific plan categories such as revision sets

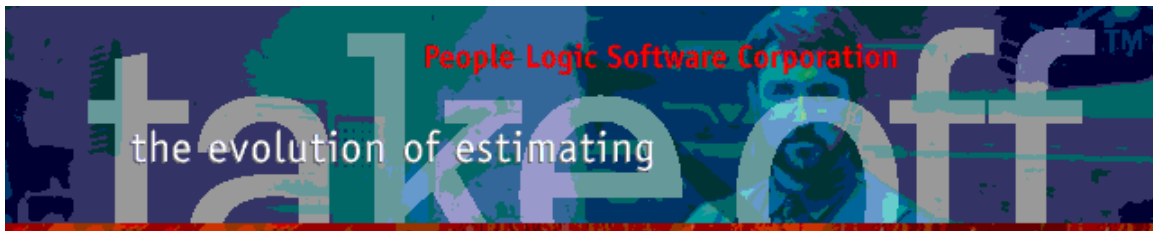

PlanViewer

TAB captions

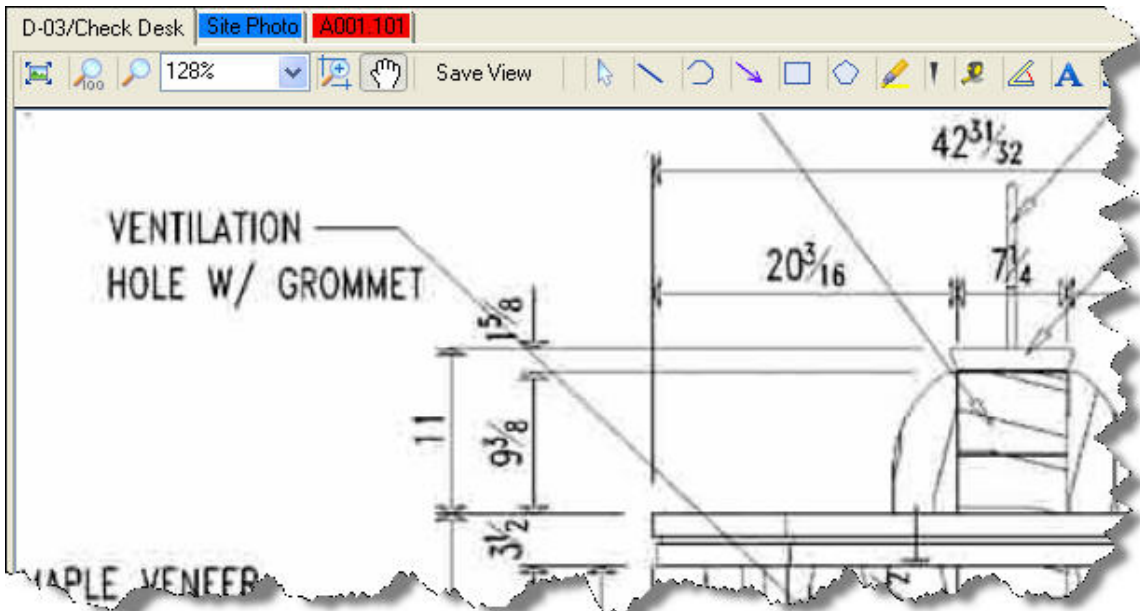

Rename specific views along with the original plan caption. If a view is renamed it will be labelled as: TAB caption/ PLAN caption. Thus you will be able to label specific elevations or plan views within a plan.

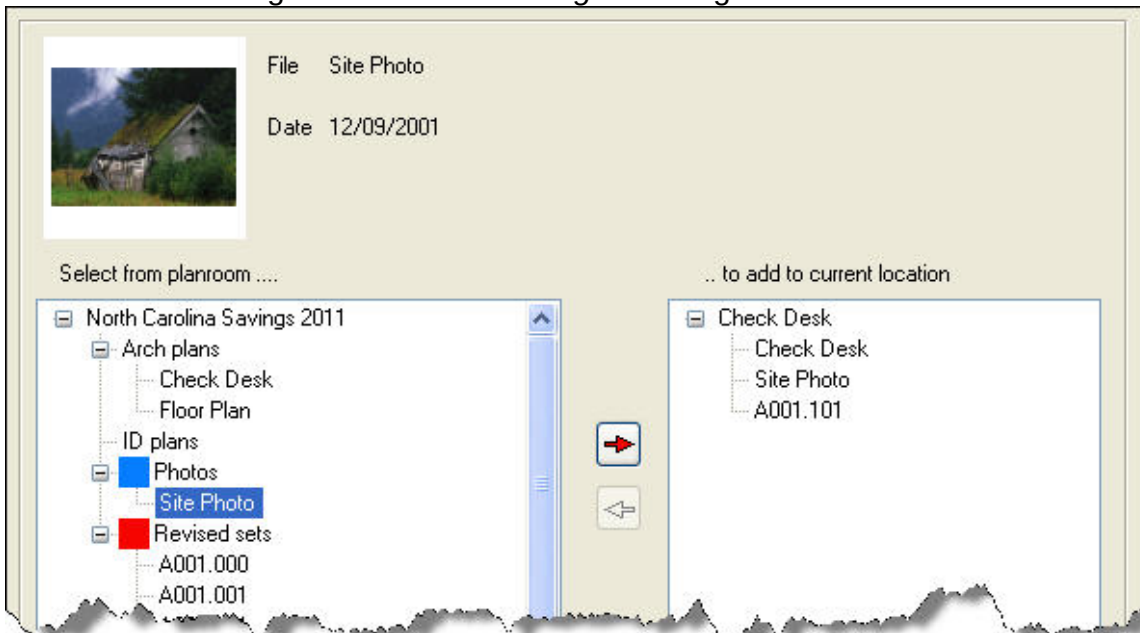

TAB colors

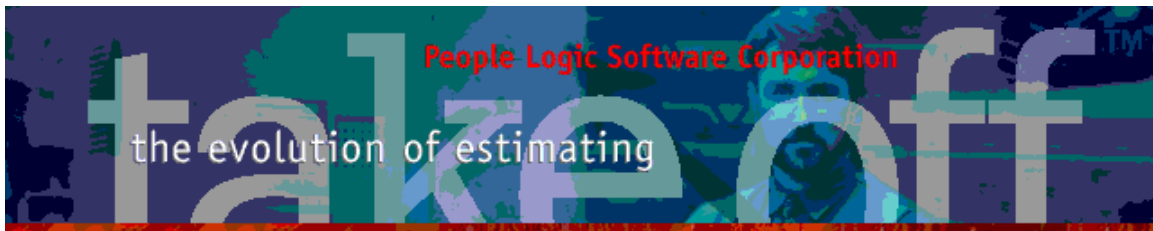

Plan categories which have been color coded will now show on TAB labels.

Select Pages

Similar color coding shows in "Select Pages" dialog.

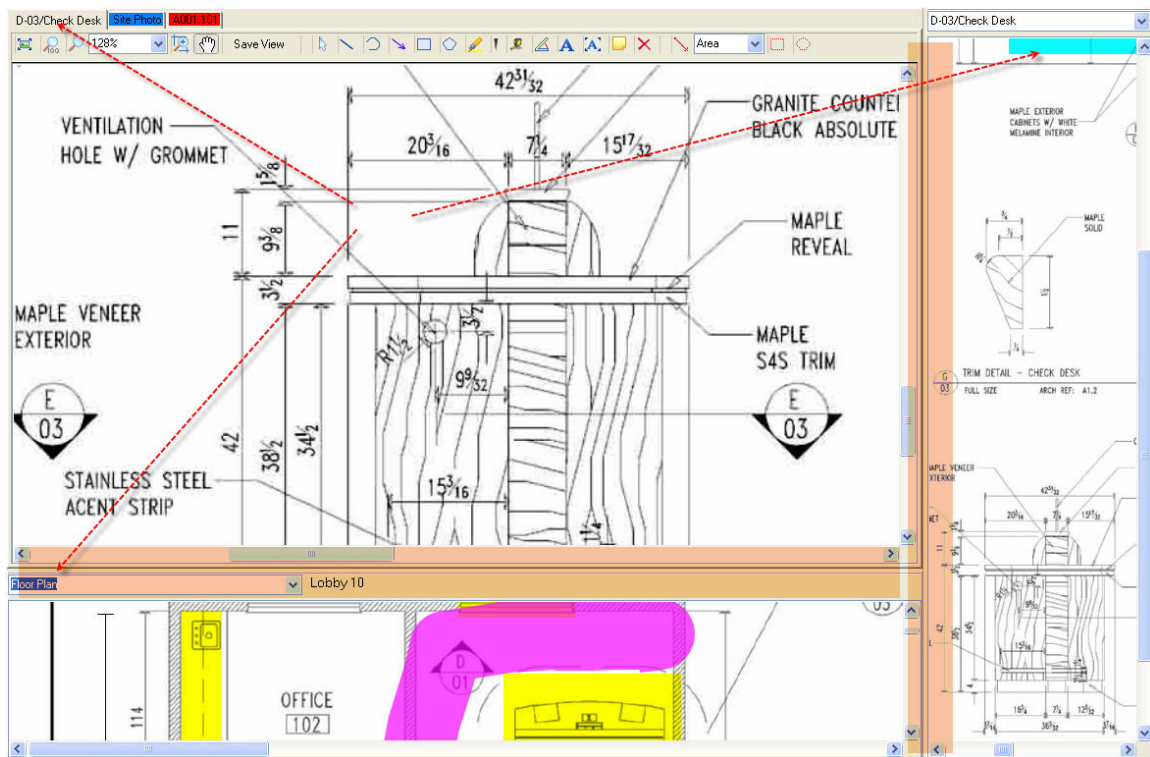

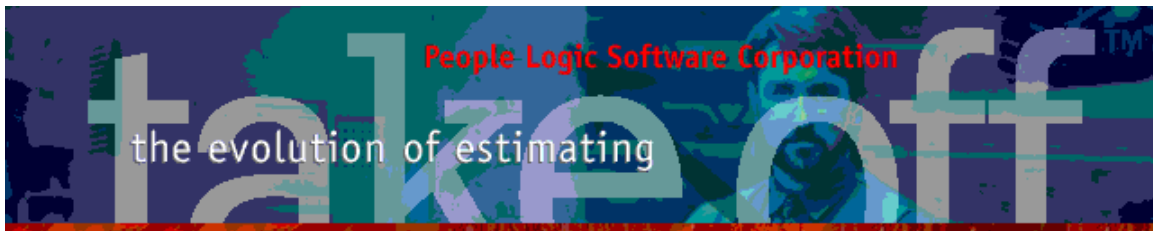

Save Layout

Each location can save a favorite layout which includes:

- TAB view
- Parent view
- Detail view
- Height of Parent view
- Width of Detail view

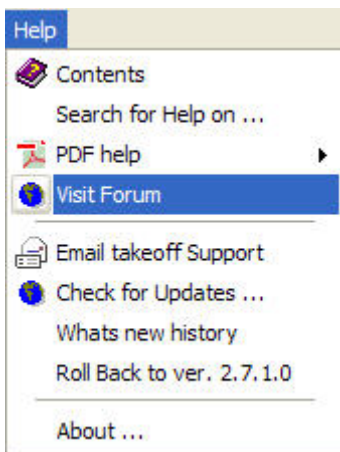

Menu

Help

People Logic Forum has a link from within the Help menu. The forum will be used to post revisions, help by users, feature request, show photos and any relevant takeoff news. You should all have received your login accounts if you wish to post messages. Viewing requires no login.

“Unable to open Project..”

1. Most cases were a result of older running version within the same site using File|Restore. This automatically modified tables to a downgraded version. Now the table structure will be left unaltered.
2. Typically a newer running version attempting to open the above case had missing field errors on Open. Now, a message "*Fields missing from Material.db after last session. Reopen project for Validation.*" will show. The project has been tagged for version 0 and the next File|Open will force validation to take place.

Any comments are welcome for future enhancements.

Thank you
