Office 1\Finish Carpentry

## MathStuff

Expression builder symbols now organized by User categories.

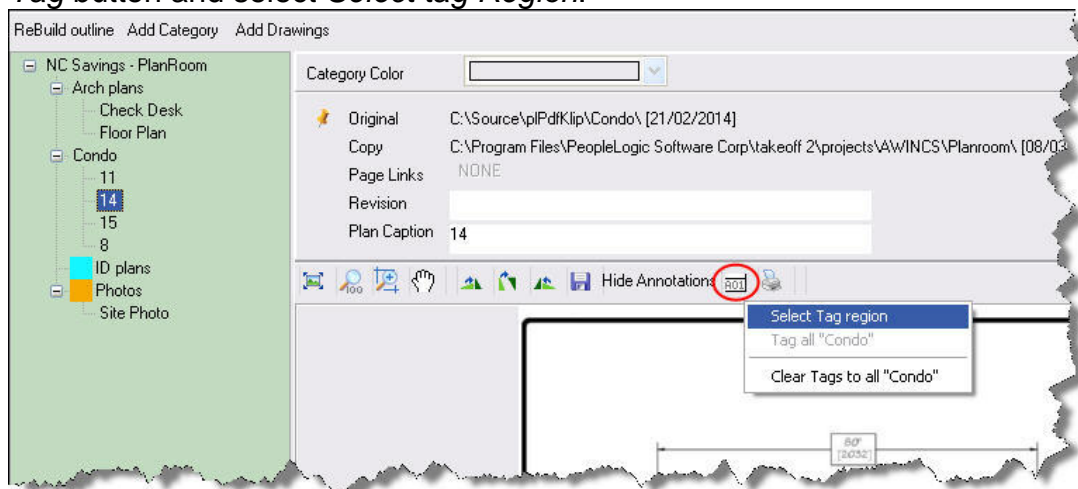

## planRoom

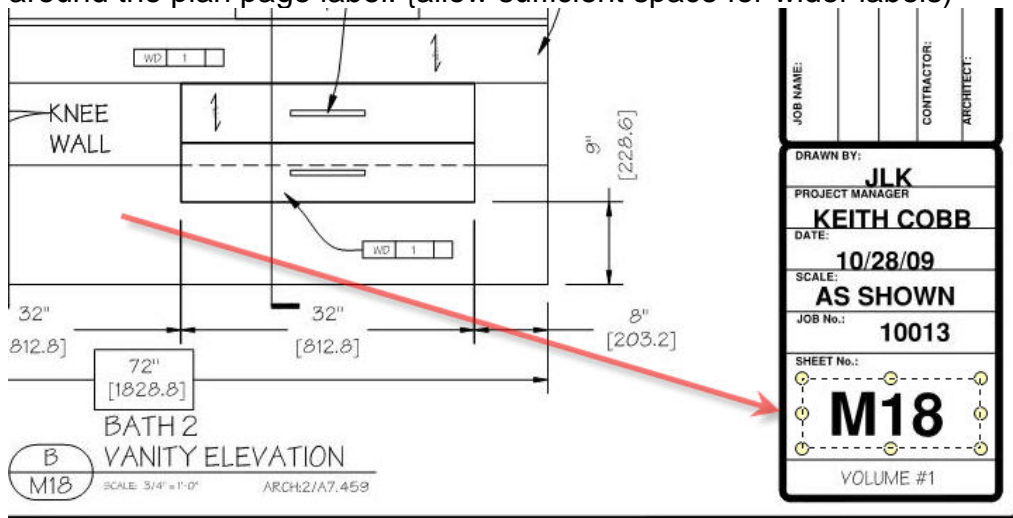

### Plan Tags

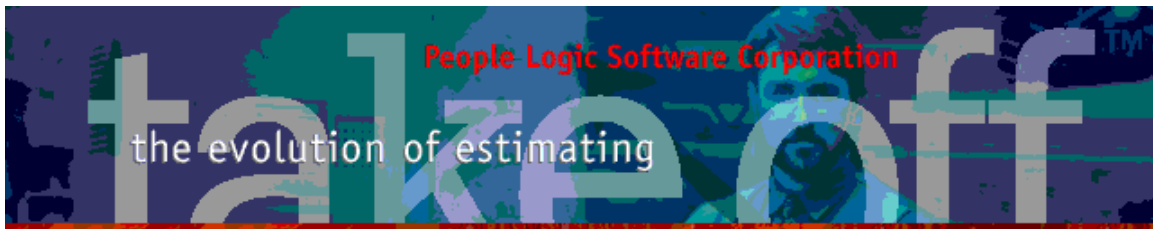

Plan page labels(Tags) have been extracted to assist in page naming. Typically these are located in the lower right hand corner of plan pages.

Tagging is initiated by first selecting any page with a plan category. Click the **Tag** button and select **Select tag Region**.

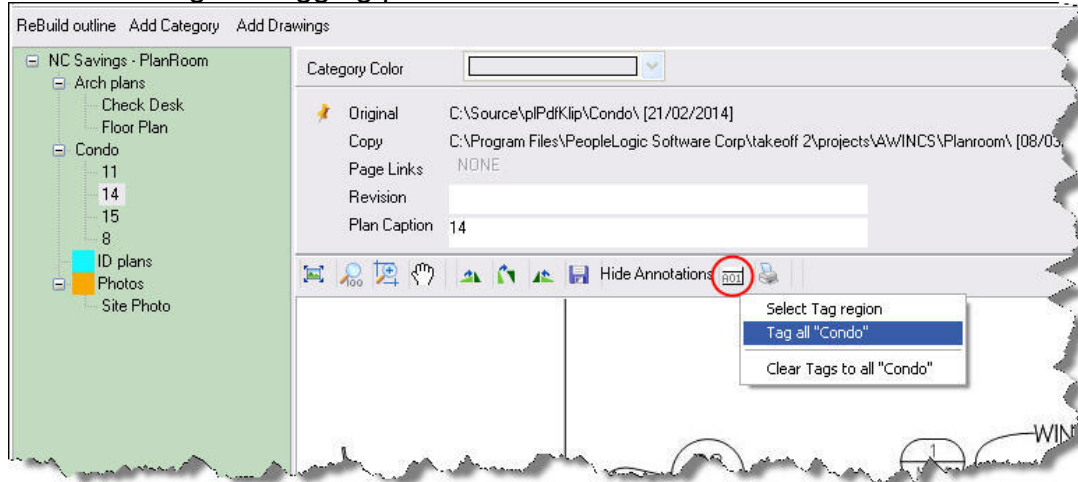

The view will be panned to the lower right corner at 100% zoom. Mouse select around the plan page label. {allow sufficient space for wider labels}

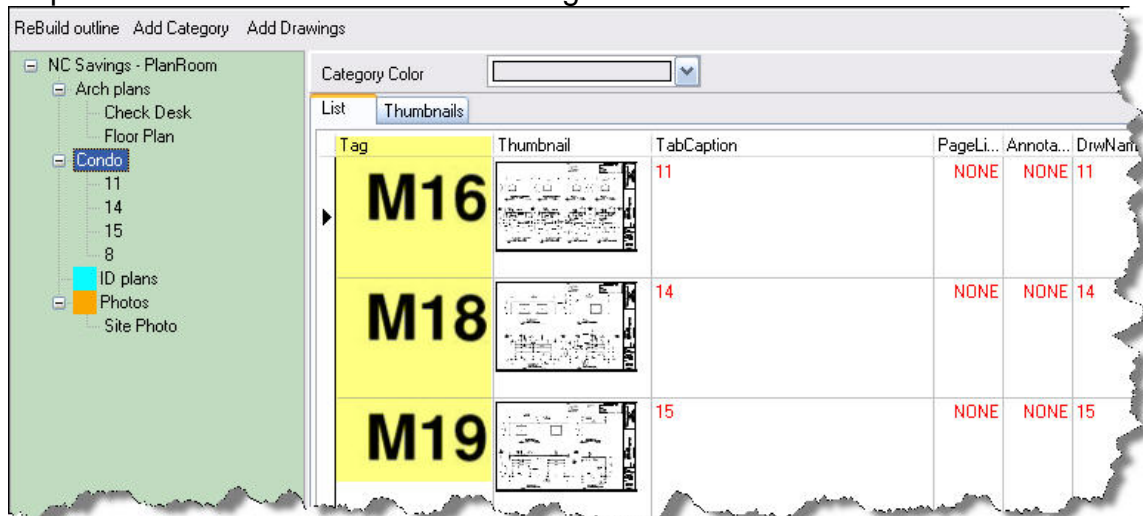

Now, click the **Tag** button again and select **Tag all "my Category"**. A progress bar will run during the tagging process.

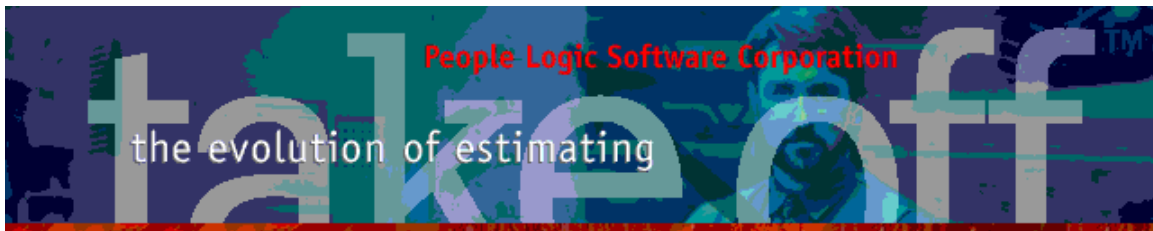

A quick look in list view will show the tags.

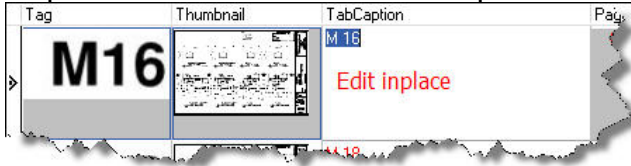

*note – Thumbnail contrasts has also been improved for newly added drawings.*

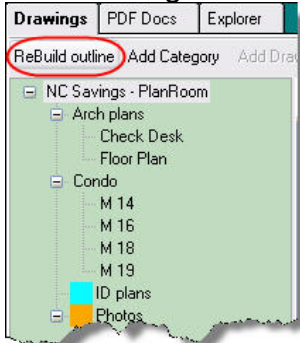

Captions can now also be edited place while viewing the actual label.

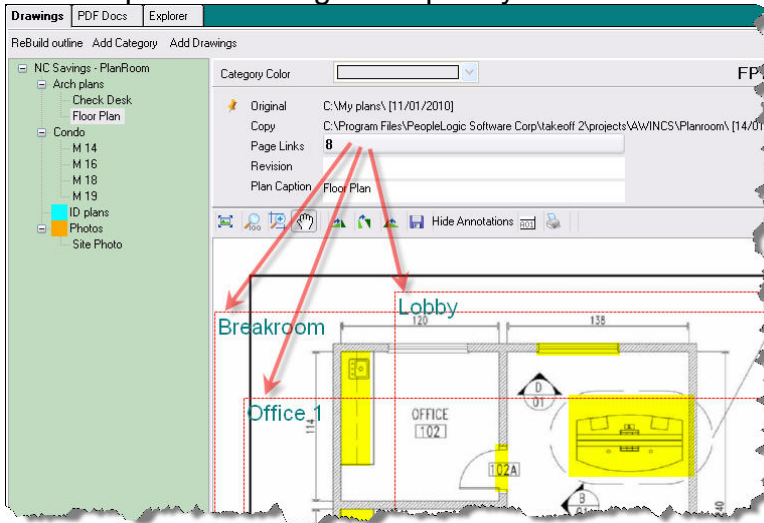

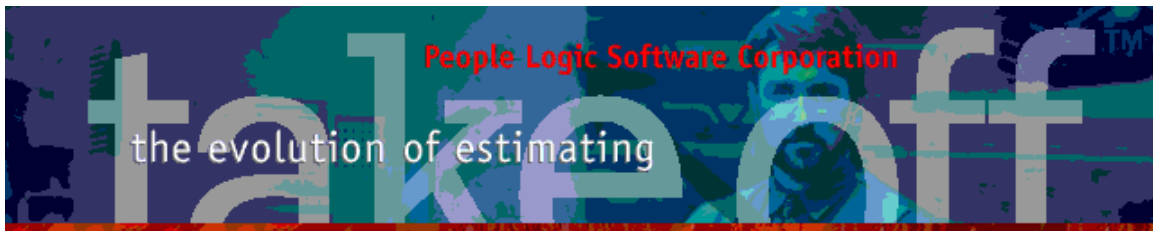

The drawing outline can be redrawn with the new “ReBuild outline” button;

## Page links

Page links have been expanded to more than showing a list of linked locations(Rooms). Views per each page will be outlined in red along with the full location path. Outlining is temporary and not saved.

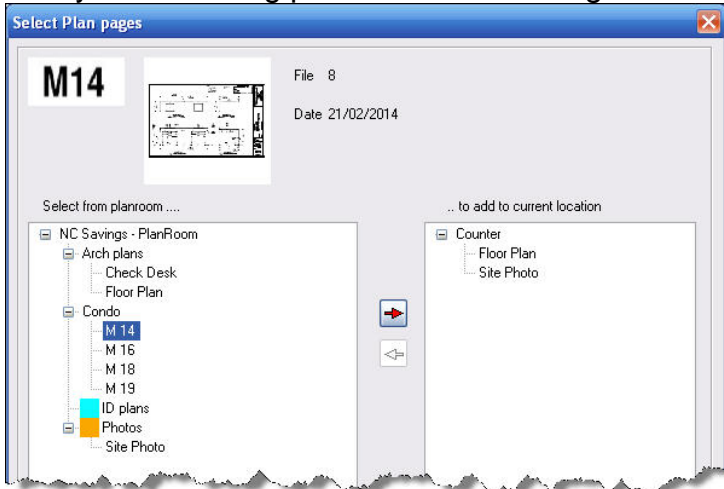

## planViewer

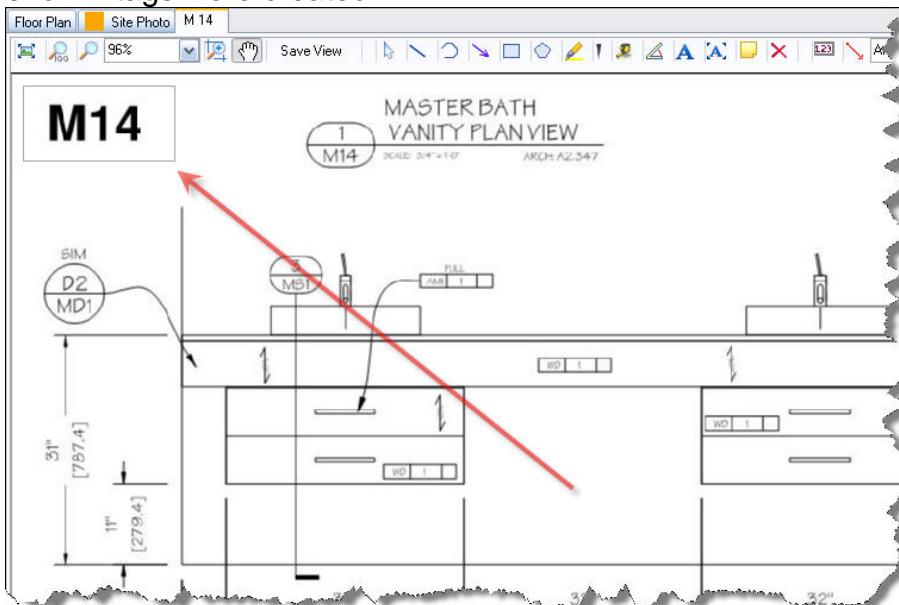

### Plantags

The Plan tags created in planRoom are visible within planViewer.

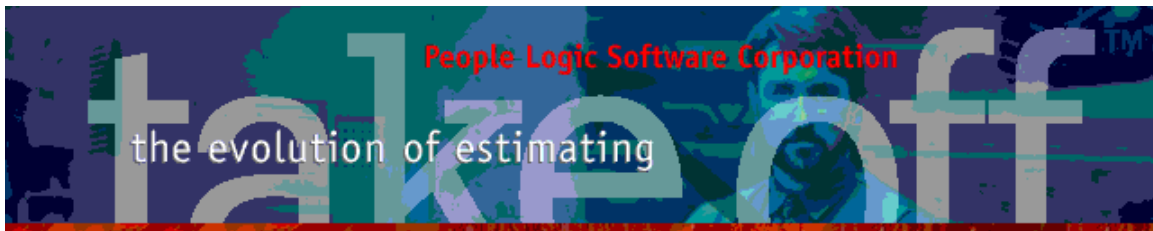

Firstly when adding plans from *Select Pages*.

Also, in the upper left hand plan viewer section. The rectangular region will only show if tags were created.

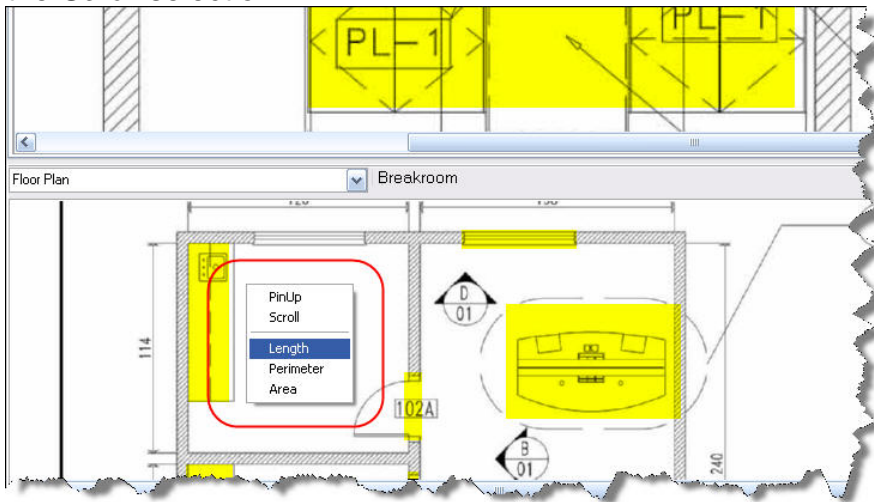

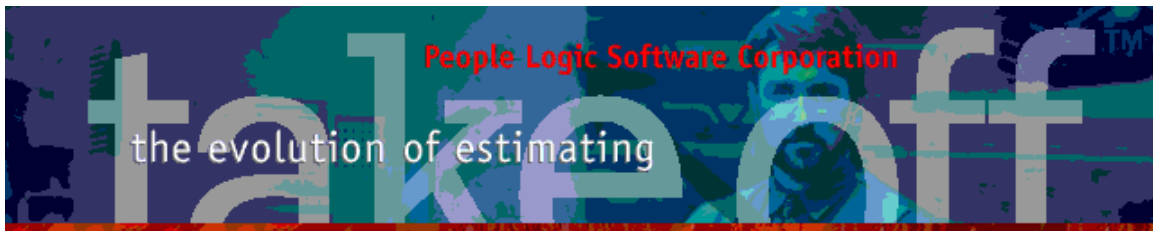

## ***Measuring(Detail/ Parent views)***

Measuring outside the Main view screen is now possible using the right click context menu. This includes length, perimeter and area of rectangles based on the settings from the scale toolbox. To exit measuring mode for zoom/pan use the *Scroll* selection.

## Reporting

Integrating plan images along with takeoff line items is now possible using the Report button.

PDF output is sent to the Windows desktop.
